OBJECTIVE

I am a Python Backend Developer with strong experience in frameworks like Django and Flask. Proficient in designing and building scalable, secure, and efficient backend systems, with a solid understanding of RESTful API development, database management (MySQL), and server-side logic. Besides backend expertise, I have good knowledge of frontend technologies such as HTML, CSS, and JavaScript, enabling effective collaboration with frontend teams and contributing to full-stack projects. Through projects.

PROJECTS

Solar System Model (2024-present)

[-Solar-Model-Link](#)

- Designed and developed an interactive solar system website using HTML, CSS, and JavaScript, showcasing the planets and their characteristics:
- Interactive 3D model of the solar system.
- Implement CSS grid and flexbox for layout management.
- Utilized JavaScript for dynamic effects and interaction

Animals Wikipedia (2022-2024)

[-Animals-Wikipedia-Link](#)

- The Animals Wikipedia is a responsive, user-friendly web application that provides information about various animals. The website uses HTML for structure, CSS for styling, and Bootstrap for responsive design and layout. Users can explore animal facts, categories, and images in an interactive format, making learning about animals fun and accessible.
- Built a dynamic web application that allows users to explore animal facts, images, and behavior using a structured layout and responsive design.
- Each animal page features high-quality images of the animals, which adapt to the layout using CSS for a smooth, attractive presentation.
- Applied modern CSS techniques to ensure the website was visually appealing and easy to navigate.
- In the given link there is only a demo page in which you will not see the details of the animals, who will see my full side
